Where Nature & Science Meet

CORONAVIRUS AND GARLIC MARKET NEWS

Customers may have questions on China's coronavirus affecting our products, we have some information from the CDC website about the virus not living on packaging or products. For more information, please visit the CDC website:

<https://www.cdc.gov/coronavirus/2019-ncov/faq.html>

Q: Am I at risk for novel coronavirus from a package or products shipping from China?

There is still a lot that is unknown about the newly emerged 2019 novel coronavirus (2019-nCoV) and how it spreads. Two other coronaviruses have emerged previously to cause severe illness in people (MERS and SARS). 2019-nCoV is more genetically related to SARS than MERS, but both are betacoronaviruses with their origins in bats.

While we don't know for sure that this virus will behave the same way as SARS and MERS, we can use the information from both of these earlier coronaviruses to guide us. In general, because of poor survivability of these coronaviruses on surfaces, there is likely very low risk of spread from products or packaging that are shipped over a period of days or weeks at ambient temperatures. Coronaviruses are generally thought to be spread most often by respiratory droplets.

Currently there is no evidence to support transmission of 2019-nCoV associated with imported goods and there have not been any cases of 2019-nCoV in the United States associated with imported goods. Information will be provided on the 2019 Novel Coronavirus website as it becomes available.

As far as New-Gar® garlic, we brought in an inventory in November and early December because our plant closes for the Chinese New Year for a month, but this year, they decided to close two months due some overdue maintenance. Sometimes things work for a reason, and in our case, it is allowing us to have inventory until April 2020 covering our customers needs. Once the production resumes in a safe environment under government rules and regulations, we should be able to catch up in production in no time as our crop had been harvested and processed in dry pellets in September 2019 and stored in a refrigerated warehouse awaiting final process.

For more information on New-Gar(R) garlic, please visit our website www.nature4science.com/garlic

Since the coronavirus outbreak in China, the garlic bulbs prices raised up sharply from 4RMB/kg to more than 9RMB/kg, especially at Wuhan city, Hubei province.

We sincerely don't know what effect it will have on next year's crop.

Chinese medicine believes that garlic, being an anti-viral supplement, will play a big preventive role along with other health measures.

Sadly to say that this is the time to promote the garlic.

Zaffronel® the Best Natural Alternative for Mood, Stress, Anxiety and Memory

If you need additional information or a sample, please contact our customer service at 714-223-0647/ customerservice@nature4science.com or visit our website
